INSIGHTS

▲ Render-blocking requests — Est savings of 130 ms

Requests are blocking the page's initial render, which may delay LCP. Deferring or inlining can move these network requests out of the critical path. FCP LCP Unscored

URL	Transfer Size	Duration

URL	Transfer Size	Duration

Network dependency tree

[Avoid chaining critical requests](#) by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. LCP Unscored

Maximum critical path latency: **396 ms**

Initial Navigation

/black-giant/ (energy-concept.vercel.app) - **387 ms,** 9.29 KiB

...chunks/2rx56bjrzyhhq.css (energy-concept.vercel.app) - **396 ms,** 7.33 KiB

Preconnected origins

[preconnect](#) hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

no origins were preconnected

Preconnect candidates

Add [preconnect](#) hints to your most important origins, but try to use no more than 4.

No additional origins are good candidates for preconnecting

Legacy JavaScript — Est savings of 14 KiB

Polyfills and transforms enable older browsers to use new JavaScript features. However, many aren't necessary for modern browsers. Consider modifying your JavaScript build process to not transpile [Baseline](#) features, unless you know you must support older browsers. [Learn why most sites can deploy ES6+ code without transpiling](#) FCP LCP Unscored

PASSED AUDITS (22) Show

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

ADDITIONAL ITEMS TO MANUALLY CHECK (10) Hide

- Interactive controls are keyboard focusable

  Custom interactive controls are keyboard focusable and display a focus indicator. Learn how to make custom controls focusable. Unscored

- Interactive elements indicate their purpose and state

  Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn how to decorate interactive elements with affordance hints. Unscored

- The page has a logical tab order

  Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more about logical tab ordering. Unscored

- Visual order on the page follows DOM order

- User focus is not accidentally trapped in a region

  A user can tab into and out of any control or region without accidentally trapping their focus. Learn how to avoid focus traps. Unscored

- The user's focus is directed to new content added to the page

  If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn how to direct focus to new content. Unscored

- HTML5 landmark elements are used to improve navigation

Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more about landmark elements. Unscored

- Offscreen content is hidden from assistive technology

Offscreen content is hidden with display: none or aria-hidden=true. Learn how to properly hide offscreen content. Unscored

- Custom controls have associated labels

Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. Learn more about custom controls and labels. Unscored

- Custom controls have ARIA roles

These items address areas which an automated testing tool cannot cover. Learn more in our guide on conducting an accessibility review.

NOT APPLICABLE (35) Hide

- [accesskey] values are unique
- button, link, and menuitem elements have accessible names
- Elements with role="dialog" or role="alertdialog" have accessible names.
- ARIA input fields have accessible names
- ARIA meter elements have accessible names
- ARIA progressbar elements have accessible names
- Elements with an ARIA [role] that require children to contain a specific [role] have all required children.
- [role]s are contained by their required parent element
- Elements with the role=text attribute do not have focusable descendents.
- ARIA toggle fields have accessible names

- ARIA `tooltip` elements have accessible names
- ARIA `treeitem` elements have accessible names
- The page contains a heading, skip link, or landmark region
- ARIA IDs are unique
- No form fields have multiple labels
- `<frame>` or `<iframe>` elements have a title
- `<html>` element has an `[xml:lang]` attribute with the same base language as the `[lang]` attribute.
- Input buttons have discernible text.
- `<input type="image">` elements have `[alt]` text
- The document does not use `<meta http-equiv="refresh">`
- `<object>` elements have alternate text
- Select elements have associated label elements.
- No element has a `[tabindex]` value greater than 0
- Cells in a `<table>` element that use the `[headers]` attribute refer to table cells within the same table.
- `<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.
- `[lang]` attributes have a valid value
- `<video>` elements contain a `<track>` element with `[kind="captions"]`
- `autocomplete` attributes are used correctly
- Elements with `role="none"` or `role="presentation"` do not have conflicts
- SVG elements with an `img` role have an accessible text alternative
- Tables have different content in the summary attribute and `<caption>`.
- All heading elements contain content.
- Uses ARIA roles only on compatible elements

- Image elements do not have `[alt]` attributes that are redundant text.
- Identical links have the same purpose.

Best Practices

TRUST AND SAFETY

- Ensure CSP is effective against XSS attacks
- Ensure proper origin isolation with COOP
- Mitigate DOM-based XSS with Trusted Types

BROWSER COMPATIBILITY

- Baseline Features
